Key Features of Zed Champions

ZED Champions is a blockchain-based horse racing and breeding game developed as the successor to ZED RUN. It combines NFT ownership, strategy, breeding mechanics, and cryptocurrency rewards.

1. NFT Horse Ownership

- Every horse is a unique NFT stored on the blockchain.
- Players have true ownership of their digital assets.
- Horses can be bought, sold, and traded in the marketplace.

2. 24/7 Automated Racing

- Horses participate in races continuously.
- No manual race scheduling is required.
- Matchmaking pairs horses with suitable competitors.

3. Breeding System

- Players can breed existing horses to create offspring.
- New horses inherit traits from their parents.
- Breeding requires strategic selection of horses.

4. \$ZED Token Economy

- \$ZED serves as the primary in-game currency.
- Tokens are used for breeding and marketplace activities.
- Players can earn rewards through participation.

5. Strategy and Customization

- Players can equip augments to enhance performance.
- Different augment combinations create unique strategies.
- Matchmaking rankings influence competition levels.

Specialization of ZED Champions

1. Blockchain-Based Horse Racing

Specializes in virtual horse racing powered by blockchain technology. Provides transparent ownership and race records through decentralized systems.

2. NFT Asset Ownership

Focuses on giving players true ownership of racehorses as NFTs. Allows buying, selling, trading, and managing digital horses.

3. Strategic Breeding Mechanics

Emphasizes breeding horses with unique genetic traits. Enables players to create stronger and rarer offspring for competition.

4. Play-and-Earn Ecosystem

Rewards players through participation, racing performance, and asset management. Uses blockchain tokens to support in-game economic activities.

5. Competitive Racing Environment

Features ranking systems and matchmaking based on horse performance. Encourages long-term progression and competitive gameplay.

6. Digital Stable Management

Allows players to build, manage, and optimize their horse stables. Combines racing, breeding, and resource management into one experience.

7. Web3 Gaming Innovation

Integrates NFTs, smart contracts, and cryptocurrency into gaming. Bridges traditional sports simulation with decentralized technology.

Integration of ZED Champions

1. Blockchain Integration

Uses blockchain technology to store horse ownership and transaction records. Ensures transparency, security, and decentralization of game assets.

2. NFT Integration

Racehorses are represented as NFTs. Players can own, trade, and transfer horses through blockchain wallets and marketplaces.

3. Cryptocurrency Integration

Integrates the \$ZED token for breeding, rewards, and marketplace transactions. Enables a player-driven digital economy within the game.

4. Smart Contract Integration

Smart contracts automate ownership verification and asset transfers. Reduces the need for intermediaries and increases trust.

5. Marketplace Integration

Provides a marketplace for buying, selling, and breeding horses. Supports peer-to-peer transactions between players.

6. Wallet Integration

Connects with Web3 wallets for authentication and asset management. Allows secure storage and transfer of NFTs and tokens.

7. Data and Analytics Integration

Tracks horse performance, race history, and rankings. Helps players make informed breeding and racing decisions.

Web2 vs Web3 Difference for a Horse Racing Application

Feature	Web2 Horse Racing Game	Web3 Horse Racing Game (ZED Champions)
Ownership	Horses are owned by the game company.	Horses are owned by players as NFTs on the blockchain.
Asset Trading	Trading is limited or controlled by the platform.	Players can freely buy, sell, and transfer NFT horses.
Data Storage	Game data is stored on centralized servers.	Ownership and transactions are recorded on a decentralized blockchain.
Payments	Uses traditional payment methods such as credit cards and bank transfers.	Uses cryptocurrencies and blockchain-based tokens such as \$ZED.
Transparency	Players must trust the company for game records and transactions.	Transactions and ownership records are publicly verifiable on the blockchain.
Intermediaries	Platform acts as the central authority for all transactions.	Smart contracts automate transactions without intermediaries.
Rewards	Rewards usually remain within the game ecosystem.	Rewards can have real-world value and may be traded externally.
Account Access	Login through email, username, or social media accounts.	Login through Web3 wallets such as MetaMask.
Marketplace	Controlled by the game developer.	Decentralized trading between players using NFT marketplaces.
Player Control	Limited control over digital assets.	Full control and custody of digital assets through personal wallets.
